

Floe

Part No: FLOE

If like most boat owners you wish to protect the integrity of your water system on the boat and ensure the safety of all who visit the boat then this is the product to choose.

If you would like to be able drain down the boats water system in a easy inexpensive way that doesn't involve paying anyone else and still allow the use the boat through the winter, draining it before you leave, again this is another good reason for choosing the Floe.

It is always a good idea to drain the system periodically through the season, to get rid of the old stale water, when you haven't visited for a while. Before the Floe, no matter how much you ran the taps, the water would taste somewhat peaty, as up until now the only alternative was to flush with sterilising liquids and lots of water. Peace of mind at a price that's easy on the pocket. A novelty I'm sure you'll agree.

The unit simply allows for easy connection of a compressed air supply at a pressure that is safe for the system and the operator. The compressed air will expel the water from all of the system along with any dirt and other foreign bodies.

So after much research and prototyping we now have a solution that does everything that you need it to do. Follow the simple instruction and you will see instantly the benefits of installing and using the new Floe device, you will also have peace of mind that the system is drained in winter, the integrity of the system is good and also more importantly majority of the nasties that chose to live in the water supply system have been removed.
